Instructions to Authors

Papers should preferably be written in English. Editorial scrutiny can proceed more quickly if mss are submitted in **duplicate** (illustration copy should comprise original drawings etc., plus one copy). Papers should not exceed **14 printed pages** plus **8 figures** taking up not more than 5 pages altogether. This equals 25 typewritten pages of 32 lines each. Exceptions to this rule can be made only with the agreement of the Editor-in-Chief. A paper should not be divided into several parts in order to make it appear shorter. Authors are asked to prepare manuscripts (headings, arrangement of tables etc.) in accordance with the journal's accepted practice.

Short Communications of interesting cases will be published out of order. Maximum length is 4 printed pages, including tables; they may contain 2 figures and only strictly relevant literature. Short Communications in English are to be preceded by a **German summary** and those in German by an **English summary**.

1. **Manuscripts** should be typed in double-line spacing with wide margins on one side of the paper only. The author should mark in the margin where figures and tables may be inserted. Form and content should be **carefully checked**. A charge will be made for changes introduced after the manuscript has been set in type.

2. The **title page** should comprise: title of paper, first name and surname of author(s), institute, any footnotes referring to the title (to be indicated by asterisks), page heading (not more than 72 typewriter strokes, including spaces), address to which proofs should be sent.

3. Each paper should be preceded by a **summary** of the main points. Papers in English should preferably have a summary in German. Papers in German should also have the title and an exhaustive summary in English.

4. **Key words**. Immediately following the summary not more than **5 key words** should be supplied for subject indexing. They should be given for Short Communications, too. Key words should be taken from the Index Medicus (Medical Subject Headings) or, failing this, composed on the same principles.

5. The following should be marked for **small print**: materials and methods, case reports, literature reviews and other secondary matter. This is not done to save money — it costs more to set up — but to improve presentation.

6. Passages in the text which are to be emphasized should be underlined once for **italics**.

7. **Footnotes**, other than those referring to the title heading, should be numbered consecutively.

8. The **bibliography** should include only works referred to in the text. They should be cited as follows: *journal papers* — names of all authors and initials, full title, journal as abbreviated in World Medical Periodicals, volume number, first and, if practicable, last page numbers, year; *books* — names of authors, full title, edition, place, publisher, year.

Examples:

Spatz, H.: Über die Beteiligung des Gehirns bei der „Winiwarter-Buergerschen Krankheit“ (Tromboendangiitis obliterans). Dtsch. Z. Nervenheilk. **136**, 86—132 (1935)

Prill, A.: Die Neurologische Symptomatologie der akuten und chronischen Niereninsuffizienz. Schriftenreihe Neurologie-Neurology Series, Band 2. Berlin Heidelberg New York: Springer 1969

References should be listed at the end of the paper in **alphabetical** order under the first author's name, more than one reference to the same author or team of authors in chronological order; more than one in the same year should have a, b, c added, as necessary.

Reference to the literature in the text should be by author and year. Another form of citation uses numbers in square brackets referring to an *alphabetically* ordered bibliography list. Either form is acceptable when used consistently throughout the paper.

9. **Figures** should be restricted to the minimum needed to clarify the text and not be regarded as merely illustrative. Information given in captions should not be repeated in the text and, similarly, the same data should not be presented in both graph and table form. Usually coloured or previously published illustrations are not accepted.

All figures should be numbered consecutively throughout. Please submit on separate sheets apart from the text (captions should be attached to the manuscript on a separate sheet). All figures should bear the author's name and the figure number.

Material sent in should comprise:

a) **Line drawings:** Please submit high-quality glossy prints in the desired final size. The inscriptions should be clearly legible. Letters 2 mm high are recommended.

b) **Instrument traces.**

c) **Half-tone illustrations:** Please submit well-contrasted photographic prints, trimmed at right angles and in the desired final size. Inscriptions should be about 3 mm high.

The figures with legends should not exceed the print area (122×195 mm). Several figures should be grouped into a plate on one page.
